PROFESSIONAL SUMMARY

I turn high-volume operational data into decisions that protect revenue. Across a 120+ vehicle Australian fleet, I manage fines, tolls and compliance reporting in Excel, reconciling large datasets and flagging where cost is leaking. I also build end-to-end data projects in SQL, Python and Power BI to sharpen the analysis behind the numbers.

EXPERIENCE

Data Operations Associate (Data Entry Specialist) Oct 2025 – Present
Sharentals | Kandy, Sri Lanka

- Directed daily fines, toll and compliance operations for a 120+ vehicle Australian fleet, ensuring accurate and timely processing.
- Managed end-to-end fine workflows: penalty validation, driver nominations, statutory declarations and Revenue NSW reviews.
- Led toll and billing operations: reconciliation, payments, invoicing and balance tracking.
- Supervised a team of two and built Excel reports tracking penalties, payments, outstanding items and operational trends.
- Coordinated with customers and stakeholders to resolve compliance and payment issues, maintaining data accuracy and confidentiality under strict deadlines.

PROJECTS

Fleet Infringement Cost Leakage & Recovery Triage *Python · pandas · scikit-learn*

- Rebuilt my real fines and tolls workflow as an end-to-end analysis on synthetic data (the real register is confidential): generation, EDA, cleaning, descriptive and predictive analytics.
- Quantified $195,792 in absorbed cost (about $7,832 a month) across 25 months, split it into three root causes, and built a logistic-regression triage model (AUC 0.731) benchmarked against a simple baseline.

Olist E-Commerce SQL Analysis *SQL · MS SQL · T-SQL*

- Loaded seven raw CSVs (about 100,000 real orders) into a staging layer and modelled them into a clean star schema.
- Found only about 3% repeat customers, revenue concentration (São Paulo about 38%, top 20% of sellers about 82%), and delivery performance using RFM segmentation and cohort analysis.

FitPulse – Gym Membership & Revenue Dashboard *Power BI*

- Interactive Power BI dashboard on synthetic membership data tracking churn, retention and recurring revenue. [Add 1–2 headline numbers and the link once published.]

EDUCATION

Higher National Diploma in Data Analytics 2024 – 2025
ESOFT Metro Campus, Kandy

Diploma in Information Technology 2023 – 2024
BCAS, Kandy

Diploma in English 2023 – 2024
BCAS, Kandy

TECHNICAL SKILLS

SQL: MS SQL, SELECT / JOIN / GROUP BY, window functions, star schema, ETL

Python: pandas, NumPy, scikit-learn, Matplotlib, EDA, data cleaning

BI & Visualization: Power BI, Excel, PivotTables, XLOOKUP, dashboards, KPI tracking

Tools & Platforms: GitHub, Google Colab, Kaggle, SAP, Jira, Visio, Lucidchart

SOFT SKILLS

Analytical thinking · Problem solving · Communication · Attention to detail · Time management · Team collaboration · Adaptability · Leadership

LANGUAGES

English · Sinhala · Tamil
